

VPN

Windows, Mac OS and Linux-based OS

We recommend Cisco's VPN client Anyconnect which you can find at:

<https://sslvpn.ethz.ch>

No configurations necessary. The only requirements are nethz username and pass-word.

Note: Linux requires that the client be installed via a shell script which can be down-loaded from the above site. Execute the installation using the command `sudo sh ./vpnsetup.sh`.

iPhone

Configuration for the built-in iPhone client:

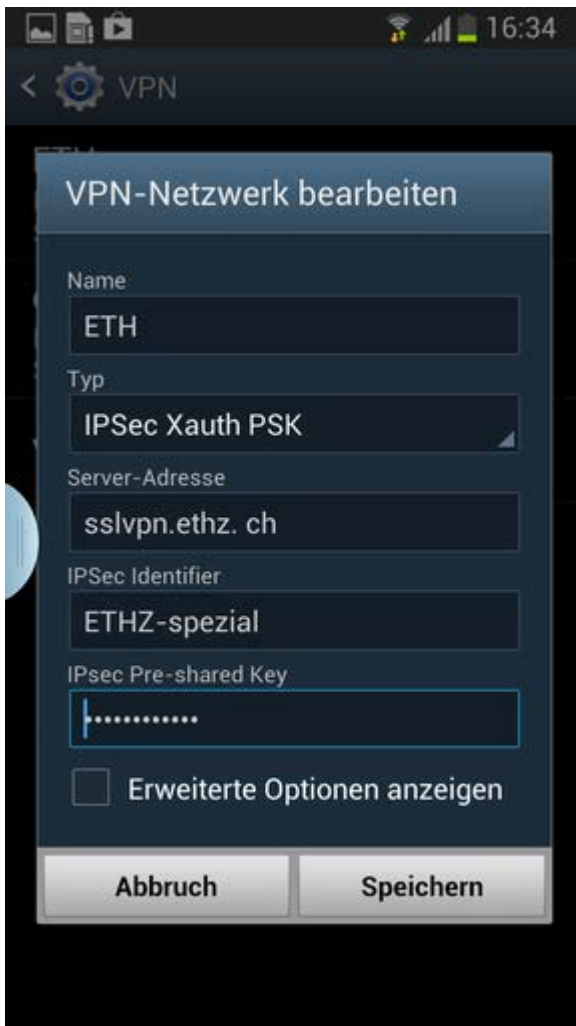

The secret group password can be found [here](#) listing:

Android Phones

Since android 4.0 the native client is supported:

If you have a lower version please check the [Cisco webseite](#) if your device is supported.

Note: IPSec-ID matches with the Group Name and the Preinstalled IPSec key matches with the Group Password.
