Forced Migration: Research and Policy

The Science and Development Forum «Forced Migration: Research and Policy» brings together scholars from different disciplines to discuss current academic research on the topic, from the ethics of migration to evidence-based policy making to logistical improvements in refugee camps. In a second part, representatives from international and governmental organisations and NGOs will challenge the scientific presentations based on their experiences in the field. The regional focus of the conference is on the Syrian crisis and the refugee movements to Turkey and Europe.
